## My personal brand statement

“Hardworking, dedicated retired professional athlete with winning attitude who delivers on goals – literally”

Dear Sir/Madam

I am responding to job advertisement for entry level position for Front End Web Developer at your company. I am thrilled to find a company that is offering position at my level of experiences and education in computer science, and I am hoping to continue in further training in coding. When it comes to desire to learn new coding and new skills, look no further.

I successfully completed my twenty- plus years international career in hockey, and now I am preparing for the next chapter in my life in Information Technology. I graduated from Solano Community College in Computer Information Science where I obtained Web Design and Development Associate degree. I am aiming for another Associate degree in Web Full-Stack Developer from Santa Rosa Junior College, and I am scheduled to graduate this Fall (2022). Also, I obtained certificate in Web and Mobile Front-End Development.

I divide my time among school, family life and a part time job. My goal is to remain productive member of our family and continue to achieve success in life, to become a leader and recognized expert in a new field. I admire computerized information technology because I believe it's going to play even greater role in our life than it does now, beyond one wildest imagination.

The past twenty years had taught me how to succeed and shine in crowd, taught me resilience and discipline. I learned to fight for every moment and learn to keep winning momentum. My past career moulded my hard-working character and righteous personality. I am used to work under pressure and deliver consistent work in the least amount of time. These attributes allowed me to achieve success and win championships and numerous personal awards. Although, my previous career is over and it soon becomes a warm but distant memory, I look forward to a bright future and challenges that a field of computer science will bring.

Lastly, I would like to ask for the opportunity to interview for the above position. I am enclosing my resume, that is available for download on my personal website as well. I am looking forward hearing from you.

Sincerely,

**Peter Sivak**
